Corrupted mysql binary. A first but it's also the first cloud-init powered (hence resize2fs on / live at boot time) image. Repaired and keep track of the incident waiting for other clues of corruption in similar situations.

```
reboot
root@drupal7:~# mysql -h
-bash: /usr/bin/mysql: cannot execute binary file
root@drupal7:~# file /usr/bin/mysql
/usr/bin/mysql: data
# apt-get install --reinstall mysql-client-5.5
root@drupal7:~# mysql
