'www-browser -dump http://localhost:80/server-status' failed.
Maybe you need to install a package providing www-browser or you
need to adjust the APACHE_LYNX variable in /etc/apache2/envvars

Hum c'était probablement de ma faute : la suite de l'upgrade en buster.

J'ai nettoyé hier des paquets restant en deb8 et le bundle était linké à de vieilles version des libs. J'ai recréé le bundle et adl fonctionne.
