Admins - Demande #4740

Revoir le paramégrage RAM de la vm agir

16/09/2020 01:42 - Christian P. Momon

Statut:	Fermé		**Début:**	16/09/2020
Priorité:	Normale		**Echéance:**	
Assigné à:	Christian P. Momon		**% réalisé:**	0%
Catégorie:			**Temps estimé:**	0.00 heure
Version cible:	Octobre 2020		**Temps passé:**	0.00 heure
Difficulté:	2 Facile			

Description

Cela fait maintenant une dizaine de jours que le nouveau paramétrage du swap est en place ([#4664](#)).
Pourtant il semble que la vm agir continue de swapper plus qu'attendu :

```
cpm@ocmstar (00:57:04) ~/…/admin/scripts 5 > ./swapshow.sh
                    Swap        Swap              RAM
                    Total       Used             Total
                    (Mo)        (Mo)      %       (Mo)
agir                 951         698      73 %    1238
```

Demande : analyser pourquoi ça swap et proposer une solution.

(le retour à 100% à la fin du graphique correspond à un reboot)
Historique

#1 - 16/09/2020 02:18 - Christian P. Momon

Voyons ce qui encombre le swap :

```
(April) root@agir:/etc/gitea[master]# psswap |head
mysqld 644 174312 kB
systemd-journal 21118 62876 kB
gitea 16083 61956 kB
```

J'en conclue que quelque chose prend de la place en mémoire qui pousse tout ça dans le swap.

En trifouillant top (touche 'f' pour ajouter les colonnes SWAP et USED, touche 'e' pour modifier l'unité) :

```
Tasks: 113 total,   2 running, 104 sleeping,   0 stopped,   7 zombie
%Cpu(s):  0.7 us,  0.3 sy,  0.2 ni, 97.8 id,  1.0 wa,  0.0 hi,  0.0 si,  0.0 st
MiB Mem :   1239.0 total,    144.7 free,    818.3 used,    275.9 buff/cache
MiB Swap:    952.0 total,    618.8 free,    333.2 used.    355.2 avail Mem

  PID USER      PR  NI    VIRT    RES    SHR S  %CPU  %MEM     TIME+ COMMAND                  SWAP    USED
16083 gitea     20   0 2837.8m 272.3m  13.4m S   1.0  22.0  49:46.10 gitea                   60.3m  332.6m
17893 www-data  20   0  518.5m 172.1m   8.7m S   0.0  13.9   1:26.46 ruby                     4.9m  177.0m
12549 www-data  20   0  387.0m 130.8m   6.0m S   0.0  10.6   0:00.36 ruby                     0.0m  130.8m
12529 www-data  20   0  255.2m 117.0m  17.5m S   0.0   9.4   0:02.40 ruby                     0.0m  117.0m
  644 mysql     20   0 1573.9m 101.6m   0.0m S   0.0   8.2 175:39.76 mysqld                 162.8m  264.4m
17778 root      20   0 1064.2m   8.3m   3.8m S   0.0   0.7   0:13.15 PassengerAgent           1.5m    9.8m
 9450 postfix   20   0   42.2m   7.3m   6.5m S   0.0   0.6   0:00.01 pickup                   0.0m    7.3m
```

Rien de vraiment anormal, 332 +177 + 130 +117 +264 + 10 + 7 = 1037, ce qui doit pouvoir le faire avec 1239M de RAM.

#2 - 16/09/2020 02:19 - Christian P. Momon

En cherchant d'éventuel OOM Kill, je suis tombé sur :

```
(April) root@agir:/etc/gitea[master]# zgrep "Out of memory" /var/log/syslog*

```

Donc il semble que fréquement (plusieurs fois par mois), cette vm manque de RAM.

Question : **qui est le glouton ?**

#3 - 16/09/2020 02:20 - Christian P. Momon

- Statut changé de Nouveau à En cours de traitement

- Assigné à mis à Christian P. Momon

Pour information, pour Gitea il est recommandé 1Go de RAM. Comme d'autres applications tournent sur cette vm, on peut penser légitime d'augmenter un peu la RAM.

Proposition :

- augmenter la RAM de 512 Mo.

Vos avis ?

#4 - 16/09/2020 17:16 - Christian P. Momon

- Fichier swapagir.jpg ajouté

- Description mis à jour

#5 - 30/09/2020 21:31 - Quentin Gibeaux

- Version cible changé de Septembre 2020 à Octobre 2020

#6 - 01/10/2020 04:15 - Christian P. Momon

Pendant la réunion de sprint, la question du total de mémoire utilisée sur le cluster a été posée.
Pour y répondre, création du script memkvm.sh dans le dépôt git admin.

Avant :

```
cpm@ocmstar (04:03:29) ~/Dossiers/April/Adminsys/git/admin/scripts 196 > ./memkvm.sh
                     KVM RAM
